Primary and Secondary Education

Examples of modules

Introduction to the Primary and Secondary Education System

The module is an introduction to the most advanced and up-to-date areas of competence in the Danish educational system. It is a prerequisite for other modules and provides a broad introduction to the history, concepts, methods and state-of-the-art perspectives in Danish education. The module provides a solid foundation for the further development of participants. Learning methodology is based on solid Danish educational values and quality standards, which involves combining theoretical and practical approaches.

Competencies acquired:

- Knowledge of the history of Danish education
- Knowledge of Danish didactics
- Introduction to the Danish concept "dannelse", a holistic approach to education
- The ability to differentiate between curricular and didactic activities in academia
- The ability to implement didactic learning approaches
- The ability to implement problem-oriented education
- Knowledge of state-of-the-art educational methods and access to continuing learning
- Planning skills with the emphasis on Danish didactics and processes
- Prerequisites for choosing other modules

Examples of other modules to strengthen your skills:

- Didactics and Learning Theory
- Facilitation of Innovative and Entrepreneurial Learning
- Social Competencies and Inclusion in the School
- Resilient Teaching and Resilient Schools
- Education and Learning with ICT
- Digital Didactic Design in Education
