# Curriculum

## Programme section

### **Bachelor of Engineering Climate and Supply Engineering**

Applicable to students enrolled in August 2021 and later.

Students enrolled in August 2018-2019 will follow the structure and subjects of the curriculum 2017.

Students enrolled in August 2020 will follow the structure and subjects of the curriculum 2020.

In case of delay in a student's study programme, the design of a personal study plan may lead to a transition to this curriculum.

## Introduction

In accordance with the Executive Order on Bachelor of Engineering, the purpose of Bachelor of Engineering is to qualify the students to carry out the following professional functions nationally and internationally:

- Translate technical research results as well as scientific and technical knowledge into practical use in development tasks and in solving technical problems
- Critically acquire new knowledge within relevant engineering areas
- Independently solve common engineering tasks
- Plan, implement and manage technical and technological facilities, including being able to involve societal, economic, environmental and occupational health and safety consequences in the solution of technical problems
- Participate in collaborative and managerial functions and contexts at a qualified level with people who have different educational, linguistic and cultural backgrounds

In addition, the education must qualify students to participate in further studies.

VIA's engineering programmes work on the basis of a common graduate profile. The graduate profile is a common profile for all VIA Engineers. The graduate profile is to be combined with the identity of the specific engineering programme.

At VIA Engineering, we are practice-oriented, project-oriented and world-focused. This is actualised in the form of qualified new graduates obtained through targeted teaching, relevant research and development, as well as collaboration and ongoing dialogue with the business community. The programmes must qualify graduates to handle practical and development-oriented business functions.

Programmes in English as well as admission of international students are hallmarks of our engineering programmes. This profile creates a unique opportunity to educate students who can act in a Danish context in an increasingly global market. Our lecturers have vast and solid practical experience and know how to anchor theory in practice through lab work, company visits and projects for and in collaboration with companies.

---

# 1 Identity of the programme

We educate and train the future engineers to handle climate change through sustainable solutions within supply of water and district heating as well as wastewater treatment.

The aim of the programme is to educate engineers with basic knowledge of climate change and sustainability within design and management of projects for

- Drinking Water Production
- Wastewater Treatment
- Distribution of water, wastewater and district heating

The degree programme focuses on the use of digital tools for the design and simulation of processes and systems.

The aim of the programme is also to educate independent and problem-oriented graduates with competencies in applying the profession's methodologies, communicating with stakeholders and in a multidisciplinary manner, as well as being part of national and international teams.

---

# 2 Graduate profile for VIA Engineers

## Purpose

The newly graduated VIA engineer works problem-oriented, project- and team-based and contributes to advising, developing, inventing and quality-assuring products and solutions. The VIA engineer creates innovative, digital, sustainable and workable solutions to and for current and future societal and engineering challenges worldwide.

## Skills

VIA Engineering educate holistic-thinking engineers who, through societal insight and personal development, can exploit the full potential of technology. Therefore, the skills of the VIA engineer range from highly specialised engineering skills to personal skills and the skills of the outside world.

### Professional engineering skills

- Masters and applies – with critical reflection – highly specialised engineering knowledge.
- Works challenge-driven, innovative and problem-oriented when developing engineering results.
- Integrates engineering and scientific knowledge, skills and methods in solving engineering challenges.
- Designs, plans, simulates, manages, implements and evaluates engineering solutions and products using digital and technological tools.
- Implements and operates solutions that match engineering needs within the industry.

### Organisational skills

- Organises and manages projects and processes based on both risk assessment and market and business understanding.
- Collaborates inter-professionally with a global view and respect for the organisation, culture and methods of businesses and stakeholders.
- Involves knowledge of sustainability and circular economy in the development and implementation of new solutions.

### Personal skills

- Works consistently with a curious and innovative mindset and seeks out, critically acquires and brings new knowledge into play throughout life.
- Communicates effectively and collaborates professionally with colleagues and people of different educational and cultural backgrounds.

---

### 3 Teaching and working methods

The engineering programme's priority focus areas within Digitalisation, Sustainability and Innovation and Entrepreneurship are integrated into relevant courses, so that together they constitute learning streams for all three areas.

Active and practice-oriented learning is supported by:

- Dialogue-based teaching with a high degree of active participation from students.
- Lectures in subjects where there is a large proportion of knowledge transfer. Lectures are usually combined with practice sessions with a student tutor.
- Project work and problem-oriented learning (PBL) are an essential part of the teaching, as the academic elements of the education programme are integrated into application-oriented engineering projects with emphasis on methodological problem solving.
- Projects being carried out in groups within the programme and in an interdisciplinary collaboration with other engineering programmes.
- Collaborating with research environments and businesses in connection with the implementation of the teaching.
- Offering an international study environment, where parts of the study can be completed abroad and where several courses are held in English for Danish and foreign students alike.
- The student's engineering internship being actively used to bring about the exchange of knowledge and experiences between VIA and the profession.

Application- and practice-oriented skills are primarily achieved by utilising VIA's facilities within laboratories, manufacturing workshops and library.

The reading of the study material requires English on level B in order to complete the programme.

Online/virtual elements can be included in the teaching.

---

### 4 Structure and content

The programme is organised as an ordinary full-time higher education programme.  
The structure and progression including exams is stated in the overview on the next page.

The official duration of the degree program is 3½ years, divided into 7 semesters of 30 ects, corresponding to 210 ECTS points in total.

The scope of each course or project is documented in the form of ECTS points (European Credit Transfer System). 1 ECTS point corresponds to a workload of 27.5 hours for a student, an academic year of 60 ects thus corresponds to 1,650 hours of work for the student.

New students are admitted every year in August.

The study includes:

- Compulsory courses and projects
- Elective courses
- Internship
- Bachelor project
- Workshops

One semester consists of 3-4 delimited courses. One course may have a volume of 5 to 10 ECTS points, and a project may have a volume of 10 to 20 ECTS points.

The course purpose, scope, learning objectives and exams are described in this curriculum.

There are 5 workshops associated with the Climate and Supply Engineering programme.

The programme is structured as illustrated below:

Semester Theme	Course	Course	Course	Course/project	Course
7. Electives	Elective course	Elective course	Elective course	SE-BPR2 Bachelor project	
6. Electives	CE-CMP2 Construction Management and Planning (compulsory)	Elective course	Elective course	SE-BPR1 Preparation of Bachelor Project	SE-SEP6 Semester Project Innovation and Entrepreneurship
5. Internship	SE-INP1 Internship				
4. Urban Infrastructure and Climate Adaptation	SE-MAL1 MATLAB	SE-SUD1 Sustainable Drainage	SE-PNM1 Pipe Network Modelling	SE-MSC1 Materials Science and Corrosion	SE-SEP4 Semester Project
3. Process Engineering	SE-TER1 Thermodynamics and Particle Dynamics	SE-HYD2 Hydraulic 2	SE-PRO1 Process Engineering	SE-CMI1 Chemistry and Microbiology	SE-SEP3 Semester Project
2. Climate Change Adaptation and Supply Infrastructure	SE-SCI2 Calculus, Linear Algebra and Dynamics  CE-SCI2 in S22	SE-HYD1 Basic Hydraulics	SE-GEA1 Engineering Geology and Geotechnical Engineering  CE-GEA1 in S22	SE-INF1 Infrastructure in Rural Areas	SE-SEP2 Semester Project
1. Sustainable Urban Development	SE-SCI1 Mathematical Analysis  CE-SCI1 in A21	SE-CCS1 Climate Change and Sustainability	SE-BUD1 Basic Utility Design	SE-UTS1 Utility Sector	SE-SEP1 Semester Project

The 5 workshops are structured as illustrated below:

<b>Semester</b> <b>Theme</b>	<b>Course</b>
<b>3. semester</b> <i>During the semester</i>	<b>PWS5</b> Workshop 5: Water Sampling
<b>2. semester</b> <i>During the semester</i>	<b>PWS4</b> Workshop 4: Soil Contamination
<b>2. semester</b> <i>During the semester</i>	<b>PWS2</b> Workshop 2: Land Surveying
<b>1. semester</b> <i>During the semester</i>	<b>PWS3</b> Workshop 3: Welding
<b>1. semester</b> <i>During the semester</i>	<b>PWS1</b> Workshop 1: Company visits

---

## 5 Compulsory elements of the education programme, 1<sup>st</sup>-4<sup>th</sup> semester

All courses and projects in the first four semesters are compulsory.

The 1<sup>st</sup>-4<sup>th</sup> semesters all contain a semester project amounting to 10 ECTS. Within these 10 ECTS, there will be input in the form of video, online lectures, learning paths, etc. covering up to 2.5 ECTS credits, which are expected to be completed and discussed together with the supervisor(s). The amount of input will vary from semester to semester

The overall purpose of the semester project is to link the semester's courses to a whole. Study techniques, project management, methodology, theory of science, research methods and teamwork will be introduced as input throughout the study in connection with the semester projects.

Each semester is themed. Knowledge and skills are acquired through the courses, while competencies are acquired and can be tested in the project – Problem-oriented learning.

1. Semester: Sustainable Urban Development
2. Semester: Climate Change Adaptation and Supply Infrastructure
3. Semester: Process Engineering
4. Semester: Analysis of a Supply District Area

### 5.1 1<sup>st</sup> semester: Sustainable Urban Development

The overall theme of the 1<sup>st</sup> semester is 'Introduction to climate change and sustainable supply'.

Expanding cities are a challenge – how can we accommodate that growth in a sustainable way?

In this context the semester project focuses on turning a green field into an environmentally friendly residential area. The amount of water, wastewater and district heating must be forecasted in order to balance supply and demand. Additionally, storm water must be handled locally.

Purpose, ECTS and assessment:

<b>Mathematical Analysis (SE-SCI1) – 5 ECTS</b>	<b>Assessment</b>
The course aims to prepare the student for further studies in Climate and Supply Engineering. Furthermore, the purpose is to enable the student to read and interpret technical literature, which use mathematics.	Individual written exam, 4 hours External assessment Danish 7-step-scale
<b>Climate Change and Sustainability (SE-CCS1) – 5 ECTS</b>	
Climate changes are one of our biggest agendas in the world today. In this course you will work with climate and climate changes and sustainable energy systems. We will take two approaches; climate change adaption and mitigation.	Ongoing tests in the form of 3 assignments during the semester and an exam in the form of a written test, each weighing 25%. Internal assessment Grading based on the Danish 7-point scale

<b>Basic Utility Design (SE-BUD1) – 5 ECTS</b>	
Humans are dependent on clean drinking water, clean energy and removal of contaminants from waste water. This course gives a basic introduction to the resources, the demand calculations and main processes in drinking water, waste water and heating utility companies.	Ongoing tests in the form of 3 assignments during the semester and an exam in the form of a written test, each weighing 25%. Internal assessment Grading based on the Danish 7-point scale
<b>Utility Sector (SE-UTS1) – 5 ECTS</b>	
Supply of water and energy and handling of waste water and storm water is managed by utility companies. The performance of these utilities depends on the legal framework, their organisation and economy and their strategies in relation to important issues such as sustainability.	Ongoing tests in the form of 3 assignments during the semester and an exam in the form of a written test, each weighing 25%. Internal assessment Grading based on the Danish 7-point scale
<b>Semester Project (SE-SEP1) – 5 ECTS</b>	
The aim of the project is to: <ul style="list-style-type: none"> <li>- Make academic competencies useful in a problem-based context.</li> <li>- Solve engineer academic issues on the basis of courses of the current semester.</li> <li>- Demonstrate the ability to prioritise issues and work in the detail with selected issues.</li> </ul> <p>The focus of the teaching in SEP1 is: Study techniques and team-based project work.</p> <p>Theme: Learning to learn</p>	Oral group exam with individual assessment. Group presentation approx. 20 minutes, exam approx. 20 minutes per student. External assessment. Grading based on the Danish 7-point scale

The learning objectives of the courses (knowledge, skills and competencies) as well as assessment are further described in Appendix 1.

**ECTS credits:** 30

## 5.2 2<sup>nd</sup> semester: Climate Change Adaptation and Supply Infrastructure

The overall theme of the 2nd semester is “Sustainable infrastructural Planning.”

The students will complete a project, where they must plan an infrastructural project assignment.

The project aims to provide students with the understanding of a basic concept of planning and distribution of supply lines for drinking water and district heating supply, and for a management of wastewater and rainwater. Besides, students will use basic concepts for designing road cross section and engineering geology methods used for road construction.

Purpose, ECTS and assessment:

<b>Calculus, Linear Algebra and Dynamics (SE-SCI2) – 5 ECTS</b>	<b>Assessment</b>
The course aims to prepare the student for further studies in Climate and Supply Engineering. Furthermore, the purpose is to enable the student to read and interpret technical literature, which use mathematics.	Individual oral exam, 20 minutes. Internal assessment Grading based on the Danish 7-point scale
<b>Basic Hydraulics (SE-HYD1) – 5 ECTS</b>	
The course aims to provide students with understanding of basic hydraulics and design urban sewer systems. Furthermore, the students learn to use Mike Urban to analyze and design sewer systems.	Ongoing tests in the form of two written assignments, each weighing 15% and final exam in the form of a major written assignment weighing 70%. Internal assessment Grading based on the Danish 7-point scale
<b>Engineering Geology and Geotechnical Engineering (SE-GEA1) – 5 ECTS</b>	
The course aims to give a basic knowledge of engineering geology and geotechnics, strength in soil and deformation of soil	Ongoing tests in the form of three written individual/group assignments, each weighing 25% and an exam consisting of a written individual course assignment, weighing 25%. Internal assessment Grading based on the Danish 7-point scale
<b>Infrastructure – Highway Design in Rural Areas (SE-INF1) – 5 ECTS</b>	
The course aims to provide the student with an understanding of basic concepts within road constructions, including pipe design and dimensioning. Furthermore, the students will receive introduction to CAD programs used for geometrical design of roads and other infrastructure planning.	Ongoing tests in the form of two written individual/group assignments, each weighing 25% and an exam consisting of a written individual course assignment, weighing 50%. Internal assessment Grading based on the Danish 7-point scale
<b>Semester project (SE-SEP2) – 10 erts</b>	
<p>The aim of the project is to:</p> <ul style="list-style-type: none"> <li>- Make academic competencies useful in a problem-based context.</li> <li>- Solve engineer academic issues on the basis of courses of the current and previous semesters.</li> <li>- Demonstrate the ability to prioritise issues and work in the detail with selected issues.</li> </ul> <p>The focus of the teaching in SEP2 is: Study techniques and team-based project work.</p> <p>Theme: Cooperation</p>	Oral group exam with individual assessment. Group presentation approx. 20 minutes, exam approx. 20 minutes per student. External assessment. Grading based on the Danish 7-point scale

The learning objectives of the courses (knowledge, skills and competencies) as well as assessment are further described in Appendix 1.

**ECTS credits: 30**

## 5.3 3<sup>rd</sup> semester: Process Engineering

The overall theme of the 3rd semester is processes in water, wastewater and energy supply systems.

The students will complete a project with focus on analyses and calculations of processes related to optimising an existing supply process (drinking water, wastewater or district heating).

Purpose, ECTS and assessment:

<b>Thermodynamics and Particle Dynamics (SE-TER1) – 5 ECTS</b>	<b>Assessment</b>
The course aims to provide the students with a basic theory within particle dynamics and basic thermodynamics.	Individual oral exam, 20 minutes Internal assessment Grading based on the Danish 7-point scale
<b>Hydraulic 2 (SE-HYD2) – 5 ECTS</b>	
To provide the students an understanding on control and regulation of pumps, valves and gates in large hydraulic systems. Avoid floodings caused by climate based floodings. Provide the students with knowledge on how to calculate pollutions from sewer systems. Introduce the students in modelling and control of pressurized pipe network in order to reduce leaks and energy consumption.	Individual oral exam, 20 minutes Internal assessment Grading based on the Danish 7-point scale
<b>Process Engineering (SE-PRO1) – 5 ECTS</b>	
The course aims to give an understanding of material processes and fundamentals of process engineering disciplines in the fields of drinking water, waste water and district heating including suggestions for optimizations.	Ongoing tests in the form of two oral assignments and one written assignment and an exam in the form of a written course assignment. All four weighing 25%. Internal assessment Grading based on the Danish 7-point scale
<b>Chemistry and Microbiology (SE-CMI1) – 5 ECTS</b>	
The course aims to provide the students with a background in basic chemistry and microbiology which can be applied to the fields of drinking water, wastewater and district heating.	Individual written exam, 4 hours External assessment Grading based on the Danish 7-point scale
<b>Semester project (SE-SEP3) – 10 ECTS</b>	
The aim of the project is to: <ul style="list-style-type: none"> <li>- Make academic competencies useful in a problem-based context.</li> <li>- Solve engineer academic issues on the basis of courses of the current and previous semesters.</li> <li>- Demonstrate the ability to prioritise issues and work in the detail with selected issues.</li> </ul> <p>Theme: self-dependent application of knowledge</p>	Oral group exam with individual assessment. Group presentation approx. 20 minutes, exam approx. 20 minutes per student. External assessment. Grading based on the Danish 7-point scale

The learning objectives of the courses (knowledge, skills and competencies) as well as assessment are further described in Appendix 1.

**ECTS credits: 30**

## 5.4 4<sup>th</sup> semester: Urban Infrastructure and Climate Adaptation

The overall theme for the 4<sup>th</sup> semester is "Urban Infrastructure and climate adaptation".

Project work is being carried out to focus on upgrading of infrastructure and climate adaptation in urban areas with associated design, adaptation and modelling of the supply pipelines as well as planning of the execution of selected construction work.

The project will be conducted in a multidisciplinary manner together with the Danish and International Climate and Supply Engineering as well as the Civil Engineering programmes.

Purpose, ECTS and assessment:

<b>MATLAB (SE-MAL1) – 5 ECTS</b>	<b>Assessment</b>
The course aims to introduce the students to MATLAB APP creation with applications on graphics, audio and Excel data transport and for PDF and CDF characteristics of statistical data. The APPs are targeted for the design and operation of supply engineering facilities.	Exam in the form of a MATLAB APP mini project, including oral presentation. Internal assessment Grading based on the Danish 7-point scale
<b>Sustainable Drainage (SE-SUD1) – 5 ECTS</b>	
The course aims to provide the students with knowledge on how to implement sustainable solutions to handle an increase of rain/raise of sea water in urban areas.	Ongoing tests in the form of two written assignments, each weighing 15% and an exam in the form of a major written assignment weighing 70%. Internal assessment Grading based on the Danish 7-point scale
<b>Pipe Network Modelling (SE-PNM1) – 5 ECTS</b>	
The course aims to enable the student to set up pipe network models for pressurized and gravity systems and analyse the systems. Analyse heat losses in a district heating network.	Ongoing tests in the form of two written assignments, and an exam in the form of a written assignment, all weighing equally. Internal assessment Grading based on the Danish 7-point scale
<b>Materials Science and Corrosion (SE-MSC1) – 5 ECTS</b>	
The course aims to provide the student with a basic knowledge of materials and products used in the supply industry and their degradation mechanisms.	Ongoing tests in the form of two oral assignments and one written assignment and an exam in the form of a written course assignment. All four weighing equally. Internal assessment Grading based on the Danish 7-point scale
<b>Semester project (SE-SEP4) – 10 ECTS</b>	
The aim of the project is to: <ul style="list-style-type: none"> <li>- Make academic competencies useful in a problem-based context.</li> <li>- Solve engineer academic issues on the basis of courses of the current and previous semesters.</li> <li>- Demonstrate the ability to prioritise issues and work in the detail with selected issues.</li> </ul> <p>Theme: Interprofessional cooperation</p>	Oral group exam with individual assessment. Group presentation approx. 20 minutes, exam approx. 20 minutes per student. External assessment. Grading based on the Danish 7-point scale

The learning objectives of the courses (knowledge, skills and competencies) as well as assessment are further described in Appendix 1.

**ECTS credits: 30**

---

## **6 Internship, 5<sup>th</sup> semester**

SE-INP1

The internship comprises a semester of 30 ECTS and timewise is placed in the 5th semester of the programme. As a general rule the internship period is paid and settled in a private or public company in Denmark or abroad. Student must be on an internship for a minimum of 20 full weeks excluding holidays, etc.

The purpose of the internship is for the student to acquire insight into practical common engineering work corresponding to engineering assistant work, combined with the integrated application of the acquired concepts, methods and techniques of the discipline in the first four semesters.

The student is responsible for finding an internship, which must be approved by VIA, who appoints a supervisor for the intern.

In collaboration with the company, the student prepares a plan for the internship with appertaining formulated assignments.

The basis for assessment of the internship is an ongoing report from the student to VIA, feedback from the internship company and a presentation where the supervisor can ask elaborating questions about the content of the internship.

If the engineering internship is interrupted before the end of the agreed internship period, the internship supervisor must, in consultation with the head of the education programme, assess whether the internship has been of sufficient length and content for there to be grounds for passing the internship present.

The internship is graded as passed/not passed. Internal assessment.

---

## **7 6<sup>th</sup>-7<sup>th</sup> semesters**

On 6th and 7th semester, students may specialise their education by choosing elective courses within the same subject area. Alternatively, they can choose freely between all subject areas.

Compulsory courses/projects are listed in section 7.1.

The content of the specialisations is described in section 7.3-7.6.  
Choosing a specialization is not mandatory.

A detailed description of the individual courses can be found in the course-descriptions.

Students may choose one course of 5 ECTS among elective courses offered by VIA's other programmes. However, this does not apply to courses where the main content consists of material from the student's previous course of study. Any choice of course from another study programme must be approved by an Engineering student counsellor, in order to secure the relevance and an increasing academic level. Courses listed in section 7.2 are exempt from this rule.

## 7.1 Compulsory courses and projects

Compulsory courses at 6./7. Semester, for all students on Climate and Supply Engineering programme.

Purpose, ECTS and assessment:

<b>Title (code)</b>	<b>Purpose / Content</b>	<b>Scope</b>	<b>Assessment</b>
Construction Management and Planning (CE-CMP2)	The aim of this course is that students become familiar with requirements for project and construction management and planning obtain knowledge of building project phases, organizational and contractual relationship.	5 ECTS	Oral group exam with individual assessment. Grading based on the Danish 7-point scale External assessment
Semester project (SE-SEP6)	A compulsory cross-sectoral semester project with the purpose to develop and document a cross-organisational innovation project in collaboration with a company or institution. It is also possible to have a cross-sectoral semester project where work is done on an entrepreneurial process.	10 ECTS	Oral group exam with individual assessment Group presentation, 20 min., assessment approx. 20 min./stud. External assessment Grading based on the Danish 7-point scale
Bachelor project preparation course (SE-BPR1)	The main purpose is to prepare the students for their bachelor project. Preparation includes selecting the subject, choosing a project group. Finding a supervisor and maybe an external partner, analyzing the subject, defending the project by oral presentation, and writing a Project Description according to VIA Engineering Guidelines.	5 ECTS	Ongoing tests in the form of three individual written assignments, weighing 20 % in total, a written group assignment (project description), weighing 60 % as well as oral exam, weighing 20 %. Grading based on the Danish 7-point scale Internal assessment
Bachelor project (SE-BPR2)	Carrying out the project including follow up on the time schedule and completion of the planned activities. Documentation of time used according to the project record. Application of computational technology relevant to the project. Documentation and promotion of the project result in a report. Planning of the oral presentation of the project.	15 ECTS	Oral group exam with individual assessment Group presentation, 20 min., assessment approx. 20 min./stud. External assessment Grading based on the Danish 7-point scale

The learning objectives of the courses (knowledge, skills and competencies) as well as assessment are further described in Appendix 1.

## 7.2 Electives

The Climate and Supply Engineering programme provides a selection of the following electives.

Electives run if there are sufficient number of registered students.

Purpose, ECTS and assessment:

<b>Title (code)</b>	<b>Content</b>	<b>Scope</b>	<b>Assessment</b>
Advanced Water Treatment (SE-AWT1)	Through information retrieval, discussions, presentations and laboratory exercises to provide the student with knowledge in and hands-on experience with current topics related to drinking water quality. The focus will be on drinking water treatment methods more advanced than the traditional aeration and bio-sand filter. The methods may be filtration, sorption, precipitation, disinfection, etc.	5 ECTS	Ongoing tests in the form of two written assignments, each weighing 25%, and an oral individual exam, weighing 50%. Grading based on the Danish 7-point scale Internal assessment
Applied Drinking Water Quality (SE-ADW1)	Through information retrieval, discussions, presentations and laboratory exercises to provide the student with knowledge in and hands-on experience with current topics related to drinking water quality.	5 ECTS	Ongoing tests in the form of two written assignments, each weighing 25%, and an oral individual exam, weighing 50%. Grading based on the Danish 7-point scale Internal assessment
Applied Wastewater Quality (SE-AWW1)	Through information retrieval, discussions, presentations and laboratory exercises to provide the student with knowledge in and hands-on experience with current topics related to wastewater quality.	5 ECTS	Ongoing tests in the form of two written assignments, each weighing 25%, and an oral individual exam, weighing 50%. Grading based on the Danish 7-point scale Internal assessment
Design & Simulation of District Heating System (SE-DSD1)	The student will obtain knowledge of energy storage systems and be able to make analysis/simulations of thermal energy storage and non-stationary energy systems.	5 ECTS	Exam in the form of a written mini project Grading based on the Danish 7-point scale Internal assessment
Design of Energy Systems (ME-DES1)	The student will obtain knowledge and calculation practice of refrigeration and heat pump systems in order to be able to design an efficient, environmentally friendly energy plant.	5 ECTS	Two sub-exams in form of 2 tests, each weighing 20% and an oral exam on the basis of a written mini project, weighing 60%. Grading based on the Danish 7-point scale Internal assessment
Design of Wastewater Treatment Plant (SE-DWT1)	Through information retrieval, discussions, presentations and laboratory exercises to provide the student with knowledge in planning establishment and design a proper waste water treatment plant (WWTP) for achieving a current wastewater quality.	5 ECTS	Ongoing tests in the form of two written assignments, each weighing 25% and an oral exam on the basis of a third written assignment, weighing 50%. Grading based on the Danish 7-point scale Internal assessment

Design of Wastewater Treatment 2 (SE-DWT2)	To create an understanding of the activated sludge process and advanced wastewater treatment. Through information retrieval, discussions, presentations, and group works to provide the student with knowledge current topics related to biological treatment of wastewater.	5 ECTS	Ongoing tests in the form of two written assignments, each weighing 25% and an oral exam on the basis of a third written assignment, weighing 50%. Grading based on the Danish 7-point scale Internal assessment
Geophysics and Pump Test (SE-GPT1)	Prepare the students to be able to address the geophysical and hydrological questions related to establishing a new source location or protection of an existing location.	5 ECTS	Oral exam Grading based on the Danish 7-point scale Internal assessment
Geothermal Systems (SE-STS1)	The student will gain knowledge about geothermal systems as a sustainable energy source and to obtain an understanding of the physical design, dimensions, functions and operation of these systems.	5 ECTS	Oral exam Grading based on the Danish 7-point scale Internal assessment
Life Cycle Assessment (SE-LCA1)	Introduction to UNs Sustainable Development Goals, Circular Economy and LCA. Methods for Life Cycle Assessment (LCA) Impacts from use and reuse of resources and materials Use of cases to evaluate alternative materials and technologies based on environmental and climate impact	5 ECTS	Individual written exam 48 hours Grading based on the Danish 7-point scale Internal assessment
Renewable Energy (ME-ENE1)	The purpose of the course is to ensure that the student will understand the design and calculation of renewable energy plants with focus on energy production, energy savings and storage and environmental conditions	5 ECTS	Oral exam Grading based on the Danish 7-point scale Internal assessment
Sludge Management (SE-SLM1)	To create an understanding of the sludge management techniques and their origin. Through information retrieval, discussions, presentations and laboratory exercises to provide the student with knowledge in and hands-on experience with current topics related to sludge management.	5 ECTS	Ongoing tests in the form of 4 experimental reports and an exam in form of an individual presentation. Each weighing 20% Grading based on the Danish 7-point scale Internal assessment
Tool Box Drinking Water (SE-TBD1)	Toolbox Drinking Water is a string of seminars on diversified drinking water related topics, that either digs a bit deeper in known areas, are new but important or are relevant for bachelor projects.	5 ECTS	Oral exam Grading based on the Danish 7-point scale Internal assessment

The learning objectives of the courses (knowledge, skills and competencies) as well as assessment are further described in Appendix 1.

## 7.3 Water Supply

### Contents

The following 55 ECTS are compulsory for the specialisation:

- Applied Drinking Water Quality (SE-ADW1)
- Toolbox Drinking Water (SE-TBD1)
- Advanced Water Treatment (SE-AWT1)
- Geophysics and Pump Test (SE-GPT1)
- Planning and Construction Management (CE-CMP2)
- 6. semester project (SE-SEP6): Innovation and Entrepreneurship
- Bachelor project (SE-BPR1+2): Project within Water Supply

In addition, the following elective is recommended:

- Life Cycle Assessment (SE-LCA1)

## 7.4 Waste Water Supply

### Contents

The following 55 ECTS are compulsory for the specialisation:

- Applied Wastewater Quality (SE-AWW1)
- Design of Wastewater Treatment Plant (SE-DWT1)
- Sludge Management (SE-SLM1)
- Design of Wastewater Treatment 2 (SE-DWT2)
- Planning and Construction Management (CE-CMP2)
- 6. semester project (SE-SEP6): Innovation and Entrepreneurship
- Bachelor project (SE-BPR1+2): Project within Waste Water Supply

In addition, the following elective is recommended:

- Life Cycle Assessment (SE-LCA1)

## 7.5 District Heating

### Contents

The following 55 ECTS are compulsory for the specialisation:

- Design of Energy Systems (ME-DES1)
- Renewable Energy (ME-ENE1)
- Design and Simulation of District Heating System (SE-DSD1)
- Shallow Geothermal Systems (SE-STS1)
- Planning and Construction Management (CE-CMP2)
- 6. semester project (SE-SEP6): Innovation and Entrepreneurship
- Bachelor project (SE-BPR1+2): Project within District Heating

In addition, the following elective is recommended:

- Life Cycle Assessment (SE-LCA1)

---

## 8 Workshops

Workshops are practice-related courses of one week's duration (outside of ECTS credits). The courses are completed parallel to the 1<sup>st</sup>-4<sup>th</sup> semesters. These are the following five courses:

PWS1	1 <sup>st</sup> semester	Company visits
PWS2	2 <sup>nd</sup> semester	Land Surveying
PWS3	1 <sup>st</sup> Semester	Welding
PWS4	2 <sup>nd</sup> semester	Soil Contamination
PWS5	3 <sup>rd</sup> semester	Water Sampling

The learning objectives of the courses (knowledge, skills and competences) and form of exam can be found in Appendix 1.

---

## 9 Bachelor project

SE-BPR1  
SE-BPR2

The programme concludes with a bachelor project (SE-BPR2), which accounts for 15 of the education programme's total 210 ECTS and concludes with an exam. The bachelor project commences in the 6<sup>th</sup> semester (SE-BPR1) with a choice of subject and preparation of a project description.

The bachelor project must demonstrate independent critical reflection within the chosen topic, and must document the student's ability to apply engineering theories and methods. The bachelor project must also reflect the student's ability to express themselves in an academic and structured manner within their subject.

BPR1 is expected to be approved before BPR2 begins.

The condition for assessment of the bachelor project, BPR2, is that the student has passed all other courses.

The Bachelor project is prepared in groups of at least three persons, unless otherwise agreed with the head of programme.

The bachelor project includes an independent experimental, empirical and/or theoretical treatment of a practical problem in connection with the central topics of the education programme.

The project must be documented in the form of a report containing a project basis, solution description, calculations, drawings, etc. If the report is a group assignment, it must be clear who wrote which sections of the report.

The students are examined in the project by oral exam/group test with individual assessment in accordance with the programme's overall goals as described in Section 1 of the Curriculum. The basis for exam is the bachelor project. It is a prerequisite for participation in the exam that the bachelor project is submitted within the stipulated deadline and meets the described criteria for the project.

Exams can take place at the earliest when all the other exams of the programme, including internships, have been passed. The exam is assessed according to the 7-point scale and with the participation of an external examiner.

See also section 7.1.

---

## 10 Title and issue of degree

Graduates who have completed the programme of study according to this curriculum + joint regulations, are entitled to use the title Bachelor of Engineering in Climate and Supply Engineering.

It is also possible to obtain the following special designations:

- Water Supply
- Waste Water Supply
- District Heating

For completed education programmes, VIA University College issues a diploma, specifying the title and, if applicable, special designation. Furthermore, information is provided on the scope of the sub-elements in ECTS, the result of the assessments achieved as well as the subjects of the project in the 6th semester and the bachelor project.

If the programme is withdrawn, VIA issues a certificate for the completed/passed courses.

The diploma is sent to the graduates e-Boks no later than 5 working days after graduation.

## 11 Appendix 1: Courses Climate and Supply Engineering Programme

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
SE-SCI1 CE-SCI1 in autumn 21	Mathematical Analysis	5	The student will get knowledge about: <ul style="list-style-type: none"> <li>• Differentiation</li> <li>• Trigonometric functions</li> <li>• Exponential functions</li> <li>• Integration</li> <li>• Vectors in space</li> <li>• Vector functions in space</li> </ul>	After the completion of the course, the student will be able to: <ul style="list-style-type: none"> <li>• Identify and make simple calculation on selected transcendental functions</li> <li>• Identify and make simple calculation on the branch of infinitesimal calculation, which deals with finding the derivative of functions with one variable, including different applications thereof</li> <li>• Identify and make simple calculation on the branch of infinitesimal calculation, which deals with integration of functions with one variable and different applications thereof</li> <li>• Analyse vectors and motion in space and perform calculations based on vector operations.</li> </ul> <p>IT is used in a pedagogical method in the course. The aim is that IT will support the learning process of the students and their understanding of the engineering professional possibilities in, for example, the application of modelling, simulation, etc.</p>	After completing the course, the student can: <ul style="list-style-type: none"> <li>• Perform a basic understanding for Calculus.</li> <li>• Use their acquired skills and knowledge to study more advanced Calculus and Algebra courses on their Engineering programme.</li> <li>• Use a commercial mathematical software to solve and perform serial technical calculations.</li> </ul>	Exam prerequisites: None  Type of exam: 4 hours written exam with external assessment.  Allowed tools: At 20-40% of the exam, the use of CAS programs is not allowed. For the rest of the exam, the use of CAS programs is permitted.  Re-exams: Method will be equal to the ordinary exam.
SE-BUD1	Basic Utility Design	5	Upon completion of the course, the student have gained knowledge of: <ul style="list-style-type: none"> <li>• Components of water, wastewater and district heating systems</li> <li>• Energy balance in order to understand energy systems and energy transfer in order optimize them and reduce the carbon footprint of heat production</li> <li>• Quality requirements for water consumption and wastewater discharge</li> </ul>	Upon completion of the course, the student will be able to: <ul style="list-style-type: none"> <li>• Use digital tools such as Heat Roadmap Europe</li> <li>• Make basic analyzes for water and wastewater quality</li> <li>• Calculation of system loading rates</li> <li>• Calculation of water consumption, heat needed and wastewater produced</li> </ul>	Upon completion of the course, the student will be able to apply knowledge and skills to: <ul style="list-style-type: none"> <li>• At a basic level suggest a process design for drinking water, wastewater and district heating</li> <li>• Analyze demand and/or flows for a given area</li> <li>• Relate the demands for the quality to the existing legislations</li> <li>• Perform simple laboratory analyses</li> <li>• Describe the main components of each system</li> </ul>	Exam prerequisites: Mandatory assignments handed in before deadline and accepted.  Type of exam: Ongoing tests in the form of 3 assignments during the semester and a final exam in the form of a written test, each weighing 25%. Internal assessment.  Allowed tools: NA

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
						Re-exam: Individual oral exam with internal assessment.
SE-CCS1	Climate Change and Sustainability	5	Upon completion of the course, the student has gained knowledge of: <ul style="list-style-type: none"> <li>• Climate and weather systems</li> <li>• Climate changes and impacts on society and the utility sector</li> <li>• Climate change adaptations and mitigations</li> <li>• Sustainable Urban Development</li> <li>• Sustainable energy systems</li> </ul>	Upon completion of the course, the student will be able to: <ul style="list-style-type: none"> <li>• Recognize and discuss the different contributions to climate changes</li> <li>• Identify suitable processes for handling surface water</li> <li>• Propose CO2 neutral energy sources</li> </ul>	Upon completion of the course, the student will be able to apply knowledge and skills to: <ul style="list-style-type: none"> <li>• Engage in discussions on climate and climate change at a qualified level</li> <li>• Evaluate and suggest solutions for sustainable urban drainage</li> <li>• Evaluate and suggest sustainable energy sources</li> </ul>	Exam prerequisites: Mandatory assignments handed in before deadline and accepted.  Type of exam: Ongoing tests in the form of 3 assignments during the semester and a final exam in the form of a written test, each weighing 25%. Internal assessment.  Allowed tools: NA  Re-exam: Individual oral exam with internal assessment.
SE-SEP1	Semester project 1	10	<u>Professional knowledge</u> The students must obtain an understanding of planning and design of sustainable infrastructural constructions and climate change adaptation in urban area. The students must gain basic knowledge in the processes for producing drinking water, treating wastewater and producing heating. <u>Study knowledge</u> <u>Effective teams</u> <ul style="list-style-type: none"> <li>• Can explain involved theories about group dynamics, teamwork and conflict resolution</li> </ul> <u>Own learning process</u> <ul style="list-style-type: none"> <li>• Can refer to involved theories of learning, motivation, feedback and study techniques</li> </ul> <u>Project framework</u> <ul style="list-style-type: none"> <li>• Can identify relevant knowledge in relation to academic and technical written communication, including the report's structure, references and source management</li> <li>• Can identify relevant presentation</li> </ul>	Through the design of a sustainable urban supply structure, the student must become familiar with organisation/stakeholders basic understanding of all 3 utility types in terms of resource, production, processes (plant), consumption/demand, understand the interconnectedness of the 3 utilities (and synergies).  Through completion of the project, group cooperation, report writing and presentation technique will be put into practice. <u>Study skills</u> <u>Effective teams</u> <ul style="list-style-type: none"> <li>• Can jointly formulate and apply a group contract in the group work</li> <li>• Can be part of and establish collaboration with project group and supervisor</li> </ul> <u>Own learning process</u> <ul style="list-style-type: none"> <li>• Can apply knowledge of learning theory and motivation theory in</li> </ul>	At the end of the semester, the students must be able to: Analyse and design supply systems for a small urban area using competencies, skills and knowledge obtained in the individual courses including <ul style="list-style-type: none"> <li>• Applying sustainability as a concept</li> <li>• Analyse and calculate demands for supply</li> <li>• Identify resources for water and energy supply.</li> <li>• Identify wastewater treatment solutions</li> <li>• Stormwater handling</li> <li>• Include basic economic and technical aspects</li> </ul> <u>Study competencies</u> <u>Effective teams</u> <ul style="list-style-type: none"> <li>• Can describe and reflect on the project group's collaboration - including own efforts - to define opportunities for improvement for future projects</li> </ul> <u>Own learning process</u> <ul style="list-style-type: none"> <li>• Can reflect on own ability to learn</li> </ul>	Exam prerequisites: Project description must be duly handed in and approved in order to register for exam in the semester project. Project report and Process report submitted before deadline.  Type of exam: Group exam consisting of an oral presentation of the project followed by an exam with an internal examiner. Grades will be individual.  Allowed tools: The handed in project.  Re-exam: Students who failed a semester project will be informed by the process supervisor, who in consultation with the internal censor decides, if the student(s) must prepare a new project, or if the failed project must be improved. In due time, the student(s) will be

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			<p>techniques for the target group, as well as use presentation techniques</p> <p><u>Problem Based Learning</u></p> <ul style="list-style-type: none"> <li>• Can explain basic elements within PBL</li> <li>• Can identify relevant issues and specific requirements for a problem formulation</li> </ul> <p><u>Project management</u></p> <ul style="list-style-type: none"> <li>• Can identify relevant project management methods, including planning, meeting management, risk assessment and quality assurance..</li> </ul>	<p>connection with own learning process as well as give and receive feedback</p> <p><u>Project framework</u></p> <ul style="list-style-type: none"> <li>• Can act source-critical as well as use references and source management, including rules for plagiarism.</li> <li>• Can convey the results of the project work and the project group's learning process in a structured way using professional concepts, both written, graphic and oral.</li> <li>• Can communicate in writing and orally to different target groups.</li> </ul> <p><u>Problem Based Learning</u></p> <ul style="list-style-type: none"> <li>• Can formulate a problem formulation, describe different solution options and explain solution proposals.</li> </ul> <p><u>Project management</u></p> <ul style="list-style-type: none"> <li>• Can explain the choice of and use of tools and methods for project management to achieve concrete goals in the project work.</li> </ul>	<p>through the various teaching activities including the work of the project group</p> <p><u>Problem Based Learning</u></p> <ul style="list-style-type: none"> <li>• Can take responsibility for the student-led part of the semester project</li> </ul>	<p>informed about the specific deadlines and the further course for the project work.</p> <p>There will be no guidance during the period up to hand in of the project. The project is assessed at an oral exam.</p>
SE-UTS1	Utility Sector	5	<p>Upon completion of the course, the student has gained knowledge of:</p> <ul style="list-style-type: none"> <li>• Basic parameters defining utility services within drinking water, district heating, storm water and wastewater</li> <li>• The utility framework and legislation in Denmark</li> <li>• Community/publicly owned utilities</li> </ul>	<p>Upon completion of the course, the student will be able to:</p> <ul style="list-style-type: none"> <li>• Identify stakeholders in the utility sector</li> <li>• Suggest suitable resources for heating and drinking water</li> <li>• Suggest suitable solutions for handling wastewater and storm water</li> <li>• In general terms describe the legal framework concerning utility companies</li> </ul>	<p>Upon completion of the course, the student will be able to apply knowledge and skills to:</p> <ul style="list-style-type: none"> <li>• Perform a simple feasibility study for a wastewater/storm water, drinking water and district heating project</li> </ul>	<p>Exam prerequisites: Mandatory assignments handed in before deadline and accepted.</p> <p>Type of exam: Ongoing tests in the form of 3 assignments during the semester and a final exam in the form of a written test, each weighing 25%. Internal assessment.</p> <p>Allowed tools: NA</p> <p>Re-exam: Individual oral exam with internal assessment.</p>
SE-GEA1 CE-GEA1 in spring 22	Engineering Geology and Geotechniques	5	<p>After the course the student must have knowledge about:</p> <ul style="list-style-type: none"> <li>- The different types of geological maps and borehole information in digital form and how this information is used to assess the expected soil layers in a certain area</li> <li>- The most common soil types and their</li> </ul>	<p>After the course the student must be able to:</p> <ul style="list-style-type: none"> <li>- Recognize and describe the most common Danish soil types</li> <li>- Use databases and collect geological information for a specific area and draw a geological profile</li> <li>- Calculate total, neutral and effective</li> </ul>	<p>Assess expected soil layers and groundwater conditions for a specific location and determine their consequences for the project (whether it is a building, road, district heating etc.)</p>	<p>Exam prerequisites for exam: The 4 assignments mentioned below must be duly handed in.</p> <p>Type of exam: Ongoing tests in the form of 3 written individual/ group assignments, weighing 25% and a final exam</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			geotechnical properties - How the soils strength and deformation parameters are determined - Theories and methods to determine settlements and the time progress of settlements - Initial- and creep settlements - Excavations, soil works, trenches for pipes and re-use of soil	stresses - Define and determine soils strength and deformation properties - Describe connections between geological conditions and conditions for excavations - Calculate consolidation settlements		consisting of a written individual course assignment, weighing 25%. Internal assessment  Tools allowed: NA  Re-exam: Individual oral exam, 20 minutes Internal assessment Topic found by draw
SE-INF1	Infrastructure – Highway Design in rural Areas	5	After completion of the course, the student must have the knowledge of: <ul style="list-style-type: none"> <li>• Road types and planning</li> <li>• Traditional asphalt types and use of these in road constructions</li> <li>• Dimensioning of pipes for drinking water</li> <li>• Pump types</li> <li>• Pump dimensioning</li> <li>• Stormwater handling</li> </ul>	After completion of the course, the student must have the skills to: <ul style="list-style-type: none"> <li>• Perform analyses and road planning in rural areas</li> <li>• Determine design parameters for a road project</li> <li>• Propose relevant design of a cross section</li> <li>• Describe elements within a cross section, including drainage principles for roads in rural areas</li> <li>• Describe where pipes and cables are placed in a cross section</li> <li>• Dimension road pavement structures based on the catalogue method</li> <li>• Use MicroStation for geometrical design of a roads cross section</li> <li>• Setup and prepare road drawings for print</li> <li>• Dimension drinking water pipes</li> <li>• Select and dimension pumps</li> <li>• Determine network structure</li> <li>• Setup drawings (plans and longitudinal profiles) including pipes</li> </ul>	After completion of this course, the student must have the competences to: <ul style="list-style-type: none"> <li>• Determine a roads lay-out in regards to Danish Roads Standards and place pipes and cables in a road</li> <li>• Dimension utility pipes based on demand</li> <li>• Select pump type</li> <li>• Dimension the selected pump</li> <li>• Design optimal pipe network structure</li> </ul>	Exam prerequisites: The students must solve course assignments based on the knowledge and skills achieved through the course. The assignments must be handed-in before deadline, and the students will be graded based on these assignments.  Type of exam: The course assignments must be handed-in on time, and the assignments will be graded. Two assignments weighing 25% each and an exam in the form of a written assignment weighing 50%.  Re-exams: Course assignment must be improved and handed-in, and the assignments will be graded. Any second resit is an individual oral exam without preparation based upon a subject found by draw (not course assignments).
SE-SCI2 CE-SCI2 in spring 22	Calculus, Linear Algebra and Dynamics	5	The student will get knowledge about: <ul style="list-style-type: none"> <li>• Application of integration</li> <li>• Matrixes and matrix algebra</li> <li>• Linear equation systems</li> <li>• Polar coordinates</li> <li>• Complex numbers</li> <li>• Ordinary differential equations of the 1st and 2nd order</li> <li>• Physical quantities and units</li> <li>• Reference systems</li> </ul>	After completing the course, the student will be able to: <ul style="list-style-type: none"> <li>• Identify Area, Centroid and Moments of Inertia for a plane region in an x-y coordinate system.</li> <li>• Identify and solve Linear equations systems.</li> <li>• Identify Area, Centroid, Moments of Inertia for a plane region and length of a curve in a polar-coordinate system.</li> </ul>	After completing the course, the student will be able to: <ul style="list-style-type: none"> <li>• Identify which parts of the acquired knowledge and skills that's relevant to a given, simple mathematical or simple real-world particle dynamic problem.</li> <li>• Model simple real-world problems especially particle dynamics problems.</li> <li>• Use their acquired skills and knowledge to study more advanced</li> </ul>	Exam prerequisites: Upload of course assignments in Wiseflow approximately one week before the exam.  Type of exam: Individual oral exam with internal assessment. 20 min. Exam is based upon course

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			<ul style="list-style-type: none"> <li>• Kinematics of particles</li> <li>• Kinetics of particles</li> <li>• Vehicle dynamics</li> </ul>	<ul style="list-style-type: none"> <li>• Make simple calculations on complex numbers.</li> <li>• Describe simple problems and solve Ordinary differential equations of the 1st and 2nd order</li> <li>• Identify kinematic relations in the description of motion particles in different reference systems.</li> <li>• Set up and perform serial calculations by using the Laws of Newton.</li> <li>• Analyse the motion of a vehicle treated a particle.</li> </ul>	Calculus, Algebra and Dynamics courses on the Engineering programme. <ul style="list-style-type: none"> <li>• Use a commercial mathematical software to solve and perform serial technical calculations.</li> </ul>	assignment(s) found by draw and without preparation.  Allowed tools: None  Re-exams: Method will be equal to the ordinary exam.
SE-HYD1	Basic Hydraulics	5	After completion of the course, the student must have the knowledge of: <ul style="list-style-type: none"> <li>• The physics of basic hydraulics</li> <li>• The design of rainwater and sewer systems</li> <li>• The Mike Urban program</li> </ul>	After completion of the course, the student must have the skills to: <p><u>Basic Hydraulics:</u></p> <ul style="list-style-type: none"> <li>• Determine type of flow</li> <li>• Use energy equation</li> <li>• Calculate single and pipe losses</li> <li>• Calculate hydraulic and energy grade line</li> <li>• Use exponential and C&amp;W's formula</li> </ul> <p><u>Sewer systems:</u></p> <ul style="list-style-type: none"> <li>• Calculate inlet for rainwater and wastewater pipelines</li> <li>• Design and dimension rainwater and wastewater pipelines</li> <li>• Perform back water calculations</li> <li>• Design basins</li> </ul> <p><u>Mike Urban</u></p> <ul style="list-style-type: none"> <li>• Create pipe systems and catchment areas</li> <li>• Create local CDS-rains with or without climate factor</li> <li>• Analyze pipe systems and basins with CDS-rains</li> <li>• Present result as drawings and animations</li> </ul>	After completion of this course, the student must have the competences to: <ul style="list-style-type: none"> <li>• Understand hydraulic problems</li> <li>• Plan and dimension of Urban sewer systems</li> <li>• Calculate and analyze urban sewer systems in Mike Urban</li> </ul>	Exam prerequisites: NA  Type of exam: 1 hand-in mandatory group assignment (a Mike Urban project) in the end of the semester, which counts for minimum 70% of final grade.  Individual assignments (homework and during classes) count for 30% of final grade (15% each). If no individual assignments have been made the final hand-in counts for 100% of final grade. Allowed tools: NA  Re-exams: 3 hours written exam
SE-SEP2	Semester project 2	10	<p><u>Professional knowledge</u></p> The students must obtain an understanding of planning and design of sustainable infrastructural constructions and climate change adaptation in urban area. The students must gain basic knowledge in the processes for transporting drinking water, wastewater, heating and storm-	<p><u>Professional skills</u></p> The students must be able to design and dimension roads and pipe systems for water, wastewater and heating in the project area. The student must also be able to design and dimension installations for local rainwater handling. <p><u>Study skills</u></p>	<p><u>Professional competencies:</u></p> <ul style="list-style-type: none"> <li>- Determine a roads lay-out in regards to Danish Roads Standards and place utility pipes in a road</li> <li>- Dimension utility pipes based on demand</li> <li>- Select pump type if necessary</li> <li>- Dimension the selected pump if it is needed</li> <li>- Design optimal pipe network structure</li> </ul>	Exam prerequisites: Project description must be duly handed in and approved in order to register for exam in the semester project. Project report and Process report submitted before deadline.  Type of exam: Group exam consisting of an oral

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			<p>water. Furthermore, roads must be designed for the area.</p> <p><u>Study knowledge</u> Application of analytical skills.</p> <p><u>Effective teams</u> Refer to knowledge about own strengths and weaknesses in connection with group work, refer to theories on personal profiles and personal and interpersonal competences as well as cultural differences.</p> <p><u>Project management</u> Can identify reviewed analysis methods, methodologies and structures within project management.</p>	<p><u>Effective teams</u> Identify and describe the group's development. Apply theories on personal profiles and cross-cultural aspects in the group work in order to describe potential conflicts in the group and suggest solutions.</p> <p><u>Own learning process</u> Describe own needs in connection with motivation for learning and act accordingly. Identify and apply preferred study techniques. List and reflect on own learning goals from the previous and current semester in the process report concerning future improvement.</p> <p><u>Project framework</u> Communicate the project work's results and the project group's learning process in a structured manner using technical terms both in writing, graphically and orally. Apply knowledge on reference and source management. Describe the project execution in a process report.</p> <p><u>Problem Based Learning</u> Describe which factors that may influence the individual and group-based learning in a PBL course. Can work based on the project group's own problem formulation.</p> <p><u>Project management</u> Can use profession-related methods and tools in project work. Can use digital tools such as office tools, digital project management as well as digital knowledge acquisition tools and portals.</p>	<p><u>Study competencies:</u> <u>Academic/technical Competence learning aims</u> Apply knowledge, skills and competences achieved during the semester to plan and design a road construction in rural areas. Plan a process by using the planning tool MS Project. Plan earth works by using mass curves and haul distances.</p> <p><u>Effective teams</u> Take responsibility for the group cooperation and actively enforce and develop the group contract. List and select between steps for development and action of the group.</p> <p><u>Own learning process</u> Give and receive constructive feedback in connection with own and other's learning process. Adjust own learning process based on experience and knowledge of own preferences.</p> <p><u>Project Framework</u> Take responsibility for the work process of report writing and presenting in cooperation with the group. Apply oral, digital and graphic project presentation skills.</p> <p><u>Problem Based Learning</u> Follow a methodology and work in a structured way on the semester project.</p> <p><u>Project management</u> Take responsibility for the management of the project work with a continuous adjustment between tasks and resources.</p>	<p>presentation of the project followed by an exam with an internal examiner. Grades will be individual.</p> <p>Allowed tools: The handed in project.</p> <p>Re-exam: Students who failed a semester project will be informed by the process supervisor, who in consultation with the internal censor decides, if the student(s) must prepare a new project, or if the failed project must be improved. In due time, the student(s) will be informed about the specific deadlines and the further course for the project work. There will be no guidance during the period up to hand in of the project. The project is assessed at an oral exam.</p>
SE-CMI1	Water Quality - Chemistry and Microbiology	5	<p>After completing the course, the student will be able to understand and use the following basic chemistry and microbiological terms and methods:</p> <ul style="list-style-type: none"> <li>- Describe and differentiate the different types of chemical bonds and</li> </ul>	<p>After completing the course, the student will be able to:</p> <ul style="list-style-type: none"> <li>- Apply basic chemical and microbiological methods to address water quality issues related to processes of drinking water,</li> </ul>	None.	<p><u>Exam prerequisites:</u> Mandatory assignments handed in before deadline and accepted</p> <p><u>Exam type:</u> Written exam in total 4 hours</p>

			<p>intermolecular forces, give specific examples of chemical compounds for each type, and give specific examples on how these can influence the water quality and can be applied in the water treatment, including ion exchange, freezing point depressions.</p> <ul style="list-style-type: none"> <li>- Describe and differentiate various aspects of aqueous solutions relevant for water quality with respect to drinking water, wastewater, district heating and climate adaptation, including coagulation, flocculation, and chemical precipitation.</li> <li>- Explain chemical equilibrium and carry out calculations with the Law of Mass Action</li> <li>- Explain and describe acids, bases, and buffers and use the calculation of pH in aqueous solutions with relevance for water treatment and water quality</li> <li>- Describe basic chemistry of gas in water with relevance for the water treatment and water quality, including dissolved oxygen and oxygen demand</li> <li>- Calculate oxidation numbers and balance redox reactions with relevance for corrosion, water treatment and water quality.</li> <li>- Describe the structure of basic organic molecules including ATP and DNA</li> <li>- Describe the taxonomic classification system of microorganisms and name common bacteria</li> <li>- List different types of microorganisms and describe the general cell structure of bacteria and eukaryotes</li> <li>- Explain the bacterial growth phases and calculate bacterial growth rates</li> <li>- Explain AOC, BDOC, biological stability and after growth in relation to water quality</li> <li>- Describe the application of disinfection strategies for microorganisms (e.g., heat, chlorination, UV)</li> </ul>	<p>wastewater, district heating and climate adaptations</p> <ul style="list-style-type: none"> <li>- Compare and evaluate water quality parameters for water samples</li> <li>- Evaluate the principles and application of various methods for chemical analyses of water samples (e.g., spectrophotometry, nephelometry, electrochemical methods)</li> <li>- Compare and evaluate the application of culture-based (e.g., HPC), enzymatic (e.g., ATP) and molecular biology (e.g. PCR) methods for water quality analysis</li> <li>- Describe growth optimum of microorganisms and understand the influence of environmental factors (e.g., temperature, pH and nutrients) on microbial growth</li> <li>- Contrast beneficial, pathogenic and indicator organisms and give examples of microorganisms in each group in water systems</li> <li>- Compare planktonic and sessile mode of growth and discuss the advantages for microorganisms of living in a biofilm</li> </ul>		<p>composed of two parts: 1-hour multiple choice and 3 hours written exam</p> <p><u>Tools allowed:</u> 1-hour multiple choice exam with no material aids allowed 3 hours written exam with all material aids allowed</p> <p><u>Re-exam:</u> Same as ordinary exam – written exam in total 4 hours composed of two parts: 1-hour multiple choice and 3 hours written exam</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			<p>- Describe the most important microbiological processes in drinking water and wastewater treatment (nitrification, denitrification, degradation of organic matter, etc.) and give examples of the involved bacteria</p> <p>- Describe the structure, development, and function of biofilms in water systems</p>			
SE-HYD2	Hydraulics 2	5	<p>Construction of model of pipe network, which integrates fjord, stream and city. Address and control climate-based water level rises by introducing pumps and flood gates.</p> <p>Construction of a model of pipelines in a pressurized system. Energy savings through pressure zones, use of elevated storage tanks and pumping strategy</p>	<p>To be able to build Mike Urban models with boundary conditions and control of flood gates and pumping stations. Understanding of the connection between water level in recipients and control and regulation strategy.</p> <p>To be able to build and calibrate EPA network models. Understanding the connection between operating strategy and energy consumption.</p>	<p>Use Mike Urban to analyze correlations between urban drainage, flow in watercourses, and water level variations in coastal recipients. Carry out long-term simulations with LTS-module. Analyze existing systems and make suggestions for the implementation of gates and pumps - and set up a management strategy. Use EPA net to analyze pipe networks and on that basis make proposals for division into pressure zones, as well as restructuring in order to facilitate monitoring and leak detection. Make suggestions for operational optimization based on analyzes of existing systems.</p>	<p><u>Exam prerequisites:</u> The compulsory assignments must be handed in.</p> <p><u>Type of exam:</u> Individually oral exam, 20 min. Internal assessment</p> <p><u>Tools allowed:</u> None</p> <p><u>Re-exams:</u> Same as the ordinary exam</p>
SE-PRO1	Process Engineering	5	<p>The student will become familiar with process principles, gain knowledge about specific unit operations, gain knowledge about instrumentation and components, understand industrial control systems and process optimization.</p>	<p>After completion of the course the student will be able to: Prepare Piping and Instrumentation Diagrams for an existing plant Demonstrate skills in calculating mass balances Identify relevant sensors and instruments in the process system. Calculate residence time distribution in reactors. Make design decisions and evaluate alternative designs. Analyse acquired data and suggest optimizations. Calculate key parameters of heat exchangers. Build simple model of automation in praxis or/and Simulink</p>	<p>After completion of the course the student will be able to: Analyse processes in a supply plant. Suggest potential optimization initiatives</p>	<p>Exam prerequisites: Course attendance incl. lab exercises min 75%</p> <p>Type of exam: Ongoing tests in the form of two oral assignments and one written assignment and an exam in the form of a written course assignment. All four weighing equally. Internal assessment</p> <p>Allowed tools: NA</p> <p>Re-exam: Oral re-exam based upon a subject found by draw, 20 min. with no preparation. Internal assessment</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
SE-SEP3	Semester project 3	10	<p><u>Academic/technical knowledge learning aims</u> The student will get knowledge on how to:</p> <ul style="list-style-type: none"> <li>- Describe the major subjects in process engineering</li> <li>- Identify various units of a supply plant</li> <li>- Describe the function of each unit</li> </ul> <p><u>Effective teams</u> Can refer to involved theories in order to increase efficiency for the group as a whole but also for the individual student</p>	<p><u>Academic/technical skills learning aims</u> After completing the course, the student will be able to:</p> <ul style="list-style-type: none"> <li>- Illustrate a supply plant by construction of a simple Process and Instrumentation Diagram (P&amp;ID)</li> <li>- Demonstrate material/energy balances for the overall process and for one or more specific compounds</li> <li>- Make a flow diagram for a supply plant</li> <li>- Calculate retention time</li> <li>- Present names of microorganisms using correct nomenclature</li> <li>- Describe beneficial or harmful effects of one or more groups of microorganisms</li> <li>- Present chemical reactions with correct notification</li> <li>- Setup chemical reactions for one or more relevant processes</li> <li>- Evaluate if a given process meets quality requirements for one or more parameters</li> <li>- Describe instrumentation and components relevant for the supply plant</li> <li>- Plan, write and review a Project Report and a Process Report</li> <li>- Prepare and carry out an oral presentation</li> <li>- Enter into a respectful dialogue and collaborate with companies for the benefit of both parties.</li> </ul> <p><u>Effective teams</u> Can plan the project group's workprocess and work with a focus on the group's learning and goals Can identify and apply methods for solving basic cross-cultural communication and collaboration problems.</p> <p><u>Own learning process</u> Can describe and analyze own learning process in the process report Can search, find and include relevant knowledge</p>	<p>Professional Competence Learning Objectives After completing the course, the student will be able to:</p> <ul style="list-style-type: none"> <li>- Analyze a supply plant</li> <li>- Suggest potential process optimizations</li> <li>- Cooperate in a group effort</li> </ul> <p><u>Effective teams</u> Able to use experience and knowledge of own preferences to strengthen group collaboration Can receive and reflect on guidance and facilitation of group collaboration Can take responsibility for structuring and adapting the form of collaboration to the members' personal and interpersonal competencies</p> <p><u>Own learning process</u> Able to independently plan, structure and optimize own learning process based on previous courses Project framework Able, in collaboration with the group, to take responsibility for the work process in connection with report writing and presentation. Can use oral, digital and graphic project presentation techniques</p> <p><u>PBL</u> Can work analytically, methodically and structured with the semester project in the project group. <u>Project management</u> Can plan, adapt and optimize a project process with reasoned selection of the specific project management tools. Can account for the use of digital tools such as digital project management as well as digital knowledge collection tools and portals.</p>	<p><u>Exam prerequisites:</u> Project report and Process report submitted before deadline. <u>Type of exam:</u> Group examination with individual assessment. Group presentation approx. 20 minutes followed by joint examination with joint discussion and individual question and answer sessions for approx. 20 minutes per student including evaluation. Individual grades are given on the basis of an overall assessment of the submitted work as well as the individual's performance during the exam. External assessment <u>Tools allowed:</u> All <u>Re-exam:</u> Students who failed a semester project will be informed by the process supervisor, who in consultation with the internal censor decides, if the student(s) must prepare a new project, or if the failed project must be improved. In due time, the student(s) will be informed about the specific deadlines and the further course for the project work. There will be no guidance during the period up to hand in of the project. The project is assessed at an oral exam.</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
				<p>Can set and reflect on own learning objectives from current and previous semesters in the process report with a view to future improvement</p> <p><u>Project framework</u></p> <p>Can communicate the results of the project work and the project group's learning process in a structured way using professional concepts, both written, graphic and oral.</p> <p>Can argue for the choice of sources and references in connection with the project work.</p> <p><u>PBL</u></p> <p>Can analyze and explain overall contexts.</p> <p>Can work with a holistic view of the project, the subjects and the outside world.</p> <p>Can work interdisciplinary.</p>		
SE-TER1	Thermodynamics and Particle Dynamics	5	<p>The students will get knowledge about: The basis of thermodynamics, ideal gases and reversible processes, the second law of thermodynamics and entropy, real substances, steam power plants, refrigeration and heat pumps systems, heat transfer/heat exchangers.</p> <p>Kinematics of a particle and kinetics of a particle, steady flow of a fluid stream and work and energy.</p>	<p>After completing the course, the student will be able to:</p> <p>Analyse a particle dynamic system and/or a simple thermodynamic system and identify and select relevant theory so the student is able to perform serial mathematical calculations on variables and main capacities for the system.</p> <p>Solve simple technical problems on the basis of fundamental calculus and dynamic or thermodynamic laws.</p> <p>Follow simple procedures with different techniques of stating and solving dynamic or thermodynamic problems.</p> <p>IT is used in a pedagogical method in the course. The aim is that IT will support the learning process of the students and their understanding of the engineering professional possibilities in, for example, the application of modelling, simulation, etc.</p>	<p>After completing the course, the student can: Identify which parts of the acquired knowledge and skills that's relevant to a given simple real-world particle dynamic or thermodynamic problem.</p> <p>Relate the acquired knowledge and skills to create simple mathematical models of real-world particle dynamic or thermodynamic problems.</p> <p>Use their acquired skills and knowledge to study more Dynamics and Thermodynamic courses on the Supply Engineering education.</p> <p>Use a commercial mathematical and other software to solve and perform serial technical calculations.</p>	<p>Exam prerequisites: Upload in WiseFlow of selected course assignments solved during course, approximately one week before the oral exam.</p> <p>Type of exam: Individual oral exam without preparation based upon course assignment(s) found by draw. Duration: 20 min. Internal examiner.</p> <p>Allowed tools: None</p> <p>Re-exam: Method will be equal to the ordinary exam.</p>
SE-SUD1	Sustainable Drainage	5	<p>The purpose of the course is to provide the students with knowledge on how to implement sustainable solutions to handle an increase of rain/raise of sea water in urban areas.</p>	<p>After the completion of the course the student must have knowledge about:</p> <ul style="list-style-type: none"> <li>• Climate change, precipitation, sea water level.</li> <li>• Methods to handle rain water locally.</li> <li>• Reuse of rain water.</li> </ul>	<p>The student will be able to communicate with students, engineers and companies about sustainable drainage and outline proposals for projects involving new and sustainable methods of handling rainwater.</p>	<p>Exam prerequisites: None</p> <p>Type of exam: Ongoing tests in the form of two written assignments, each weighing 15% and</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
				<ul style="list-style-type: none"> <li>• Green roofs.</li> <li>• Infiltration basins.</li> <li>• Open channels</li> <li>• Use of Scalgo</li> </ul>		<p>an exam in the form of a major written assignment weighing 70%.</p> <p>Allowed tools: Not applicable</p> <p>Re-exam: Individual oral exam with an internal examiner, 20 min.</p>
SE-MAL1	MATLAB	5	<p>After completion of the course the students have gained knowledge on the following:</p> <ul style="list-style-type: none"> <li>- Describe and differentiate the different types of App Building Components.</li> <li>- Explain how object creation functions operate.</li> <li>- Explain the principle of dot notation.</li> <li>- Explain how parameters can be set on objects.</li> <li>- Carry out data transport between (Excel, audio, video...) and MATLAB.</li> <li>- Carry out the graphical layout of an APP.</li> <li>- Use the object types: uifigure, uigridlayout, uipanel, uiaxes, line, patch ...</li> <li>- Define sub-functions with varargin &amp; varargout capabilities.</li> <li>- Develop event handler functions (callbacks).</li> <li>- Create dedicated APPs encompassing the above.</li> <li>- Carry out characteristics of probability density functions and their cumulative distribution functions for random variables, such as mean, variance, standard deviation and coefficient of variation and modus, median and other percentiles.</li> <li>- Use MATLAB built-in statistics functions incl.: pdf, cdf and others.</li> </ul>	<p>After completion of the course the student will be able to:</p> <ul style="list-style-type: none"> <li>- develop a MATLAB App programmatically</li> <li>- describe the statistical characteristics of PDF and CDF.</li> </ul>	<p>After completion of the course, the students will have introductory competences in programmatic APP creation that meets latest APP development features of the MATLAB® environment.</p>	<p>Exam prerequisites: The mini-project and the technical documentation must be handed in no later than the day of presentation</p> <p>Type of exam: The ordinary assessment is based on</p> <ul style="list-style-type: none"> <li>- an oral presentation of the MATLAB APP mini-project;</li> <li>- the underlying MATLAB source code (M-File);</li> <li>- attached project resources (Excel-File, Images and more) and</li> <li>- technical documentation published in HTML format.</li> </ul> <p>The mini-project and the technical documentation must be handed in no later than the day of presentation and the assessment hereof covers the entire course as a whole. (100%).</p> <p>Allowed tools: MATLAB software environment</p> <p>Re-exams: Same procedure as ordinary exam</p>
SE-MSC1	Material Science and Corrosion	5	<p>After completion of the course the student must be able to:</p> <ul style="list-style-type: none"> <li>- Demonstrate basic knowledge about metals and polymers</li> <li>- Apply standard test methods</li> </ul>	<p>After completion of the course the student must be able to:</p> <ul style="list-style-type: none"> <li>- Select a suitable material for the manufacture of components in the supply industry</li> </ul>	<p>After completion of the course the student must be able to:</p> <ul style="list-style-type: none"> <li>- Participate in development tasks covering the design and/or evaluation and improvement of components for</li> </ul>	<p>Exam prerequisites: Course attendance min 75%</p> <p>Type of exam: Ongoing tests in the form of two oral</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			<ul style="list-style-type: none"> <li>- Explain deformation, stresses and fracture in tension-loaded materials</li> <li>- Be familiar with the topics Corrosion Management and Failure Analysis</li> </ul>	<ul style="list-style-type: none"> <li>- Carry out common test methods for materials</li> <li>- Explain the relation between deformation, stresses and fracture in tension-loaded materials</li> <li>- Explain relevant degradation mechanisms of materials specific to the supply industry</li> <li>- Carry out corrosion investigation of selected materials/components from the supply industry</li> </ul>	<p>the supply industry</p> <ul style="list-style-type: none"> <li>- Combine data from various sources for developing an improved corrosion management strategy</li> <li>- Analyzed corrosion failures and link to corrosion industry standards</li> </ul>	<p>assignments and one written assignment and an exam in the form of a written course assignment. All four weighing equally.</p> <p>Internal assessment</p> <p>Allowed tools: NA</p> <p>Re-exam: Oral re-exam based upon a subject found by draw, 20 min. with no preparation.</p> <p>Internal assessment</p>
SE-PNM1	Pipe Network Modelling	5	<p>Identify the elements of a pipe network and describe their relations.</p> <p>Collect and critically assess the data for the model.</p> <p>Understand the function of a pipe network model.</p> <p>Understand how to calibrate a pipe network model.</p> <p>Data input and operation of Aquis</p> <p>Data input and operation of Energis.</p>	<p>Build and calibrate pipe network models in Aquis and Energis.</p> <p>Use the models for analyzing a pipe network.</p> <p>Suggest optimizations of a network based on the model results.</p> <p>Create and analyze scenarios.</p> <p>Use the model tools to propose solutions for a given network problem.</p>	<p>Ability to create and analyse scenarios in the modelling tools Aquis and Energis.</p> <p>Ability to critically assess an existing pipe network and suggest improvements.</p> <p>Ability to critically assess data validity.</p> <p>Ability to design and dimension pipe networks in new supply areas.</p> <p>Ability to analyse the influence of thermal storages in a district heating network.</p>	<p>Exam prerequisites: Mandatory course assignments completed, handed in before deadline and accepted.</p> <p>Type of exam: Three course assignments account for 100% of final grade, weighing equally. The exam is in the form of an internal assessment.</p> <p>Allowed tools: All tools allowed.</p> <p>Re-exams:</p>
SE-SEP4	Semester project 4	10	<p>The project is based on an analysis of a supply district area. The area is analysed in terms of utility, consumer patterns, local plans and supply potential and forecasting of changing supply needs and suggestions for correcting and expansion of the pipeline network. Academically it is based on the overall well-known and well-defined methods and with a close relationship to the way land development is carried out today in practice. The training will be based on the latest knowledge and application of current theory and principles.</p>	<ul style="list-style-type: none"> <li>• To show understanding of the entire project complexity</li> <li>• Skills in applying learned knowledge to the solving of practical project work.</li> <li>• The ability to plan and complete practical project works.</li> <li>• Skills in communication of the project results to the client.</li> <li>• To use the gained theoretical knowledge in practical activities</li> <li>• To analyse and use data</li> <li>• To set up, describe and interpret the collected data, including the development of individual competencies</li> </ul>		<p>Exam prerequisites: Project description must be duly handed in and approved in order to register for exam in the semester project.</p> <p>Project report and Process report submitted before deadline.</p> <p>Type of exam: Group exam consisting of an oral presentation of the project followed by an exam with an internal examiner. Grades will be individual.</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
				<ul style="list-style-type: none"> <li>To describe and complete a report, including presentation material</li> <li>To present the project material</li> </ul> <p>The course includes IT as a pedagogical method. The purpose is to support the students' learning processes and their understanding of the engineering opportunities, which is part of e.g. the use of modelling, simulation etc.</p> <p>Analyses of the team on basis of a Belbin test. Group formation and analyses of the strength and weaknesses of the group. You must put out a contract for the group. At the end of the project period, the group must reflect on the cooperation in the group, on basis of the teams Belbin profile.</p>		<p>Allowed tools: The handed in project.</p> <p>Re-exam: Students who failed a semester project will be informed by the process supervisor, who in consultation with the internal censor decides, if the student(s) must prepare a new project, or if the failed project must be improved. In due time, the student(s) will be informed about the specific deadlines and the further course for the project work. There will be no guidance during the period up to hand in of the project. The project is assessed at an oral exam.</p>
SE-INP1	Engineering Internship (SE-)	30	<p>The student must:</p> <ul style="list-style-type: none"> <li>gain knowledge of theory, methodology and practice within a profession or one or more fields of study</li> <li>be able to understand and reflect on theories, methodology and practice</li> <li>be aware of non-technical – societal, health and safety, environmental, economic and industrial – implications of engineering practice.</li> </ul>	<p>The student must:</p> <ul style="list-style-type: none"> <li>be able to apply the methodologies and tools of one or more fields of study and to apply skills related to work within the field/fields of study or profession</li> <li>be able to assess theoretical and practical problems and to substantiate and select relevant solutions</li> <li>be able to communicate professional issues.</li> </ul>	<p>The student must:</p> <ul style="list-style-type: none"> <li>be able to handle complex and development oriented situations in study or work contexts</li> <li>be able to independently participate in professional and interdisciplinary collaboration with a professional approach</li> <li>be able to identify own learning needs and to organise own learning in different learning environments</li> <li>promote an engineering-oriented approach during the remaining semesters on the Bachelor programme</li> <li>develop personal skills required for the professional career as engineer</li> <li>form the basis for developing personal/professional network</li> </ul>	<p>In order to get an internship evaluated, the student must fulfill the following requirements concerning mandatory assignments:</p> <ul style="list-style-type: none"> <li>Expected outcome/specific learnings targets for the internship position</li> <li>Company presentation</li> <li>Logbook</li> <li>Main academic assignment(s)</li> <li>Final reflections</li> <li>Participation in workshop for coming interns</li> </ul>
CE-CMP2	Project and Construction Planning and Management	5	<p>The student will obtain knowledge of requirements for project and construction management and planning, obtain knowledge of building projects phases, organizational and contractual relationship. The student will obtain a basic knowledge of procurement and tender legislation in Denmark, the EU, and internationally.</p>	<p>Upon completion of the course the student should: Be able to perform planning analyses and communication strategies for stakeholder management. Possess knowledge of project phases and their contents related to contractual issues in according to the Danish AB18.</p>	<p>Upon completion of the course, participants should be able to identify themselves with the directly involved stakeholders and be able to participate in construction management at large.</p> <p>After the course, the student will be able to:</p>	<p>Exam prerequisites: General active participation is a prerequisite for attending the exam, documented by peer review of 80% of the assignments, conducted in class in front of the class. Each team must also act as opponent in these presentations.</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			Furthermore, the student will obtain a basic knowledge of process - and risk management.	Possess knowledge of a building projects contracting and subcontracting relationships. Be able to perform a tendering procedure using legislation and processes for national (Danish), and international (EU) tenders The course will thus enhance the student's ability to participate in the daily work of planning and operating within the contracting, consulting and client corporation in terms of knowledge of the juridical and legal framework and procurement. Possess knowledge of process and risk management.	•Analyze, argue and explain the scope of a generic building project. •Compare, select and argue for an appropriate organization and procurement form and perspectives the different forms.	Type of exam: Group presentation followed by an individual exam with the presence of the whole group. Oral team exam – presentation and defense - based on a summary of presentations and completed papers answered throughout the semester. External examiner.  Allowed tools: No restrictions.  Re-exams: Oral individual exam - based on a summary of presentations and completed papers answered throughout the semester.
SE-BPR1	Bachelor-project Preparation course	5	At the successful completion of the course, students will be able to: Recognize forms of bias. Distinguish between primary and secondary research	At the successful completion of the course, students will be able to: Identify a good project topic in a systematic way. Create and execute search strategies to find relevant literature. Construct an experimental design for the coming project. Preparation and delivery of oral presentations. Write a Project Description following the VIA Engineering guidelines including the following parts: 1. Background description, 2. Definition of purpose, 3. Problem statement, 4. Delimitation, 5. Choice of models and methods (experimental design), 6. Time schedule, 7. Risk assessment and 8. Sources of information (reference list).	At the successful completion of the course, students will be able to: Communicate with an external partner. Extract the essence of a project and defend this clearly through oral presentation. Make effective use of feedback/feedforward from a supervisor. Work together in the project group as a team	The course is evaluated based on: • 3 written individual course assignment (20%) • 1 written group assignment – The Project Description (60%) • Oral exam: group presentation and defense of the Project Description (20%) Re-evaluations: Re-submission of a revised Project Description.
SE-SEP6	Semester project 6	10	After completing this course, the student has knowledge on how to: Plan the work process in problem solving Identify the data relevant for clarifying the problem in question Collect the data from the existing sources such as databases, literature, fieldwork, lab work, interviews, etc. Critically assess and analyse the collected data.	After completing this course, the student must be able to: Demonstrate overview and structure in problem solving Collect and analyse data in order to support a work hypothesis Show source criticism Draw conclusions based on the data analysis carried out, combined with the knowledge acquired in the previous semesters and practical placement.	After completing this course, the student will be able to apply knowledge and skills to: • Analyse a complex problem • Draw scientifically based conclusions • Demonstrate an independent and self-governed work process	Exam prerequisites: Project handed in before deadline.  Type of exam: Group presentation followed by an individual exam with the presence of the whole group. Assessed by an external examiner.  Allowed tools: All tools allowed

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
				Put the results of the work in perspective and give recommendations for actions and/or further investigations <ul style="list-style-type: none"> <li>• Illustrate the results with relevant diagrams</li> <li>• Plan, write and review a project report</li> <li>• Prepare and carry out an oral presentation</li> </ul>		Re-exam: Students who failed a semester project have to improve the project. There will be no guidance in the period up to hand in. The project is assessed at an oral exam.
SE-BPR2	Bachelor Project	15	After the completion of the project work, the student must be able to: <ul style="list-style-type: none"> <li>- Describe a given (chosen) engineering problem, list relevant tools (formulas, methods, software, etc.) to clarify the problem, apply the tools, reflect and conclude.</li> <li>- Understand how the conclusion/solution to the given problem influences connected areas theoretically and/or technically.</li> </ul>	After the completion of the project work, the student must be able to: <ul style="list-style-type: none"> <li>- Apply engineering theories and methods within chosen subjects and independently be able to plan and carry out experiments or practical measurements as appropriate.</li> <li>- Acquire new knowledge critically within relevant engineering fields.</li> <li>- Apply quality assurance/critically review data and results.</li> <li>- If relevant, make financial estimates for the project/solution.</li> <li>- Present all relevant information in report and appendix, using references and sources of information correctly.</li> <li>- Extract the essence of the project and communicate this clearly orally and in writing.</li> </ul>	After the completion of the project work, the student must be able to: <ul style="list-style-type: none"> <li>- Analyse a given (chosen) problem, collect data, select appropriate methods of analysis, put the results into perspective and conclude.</li> <li>- Plan and carry out the project and related activities according to self-defined time schedule.</li> </ul>	Exam prerequisites: Completion of the mandatory and elective courses in Supply Engineering or approved (by SE Head of Department) courses of similar extent from other branches of engineering. Report handed in before deadline  Type of exam: Group presentation followed by an individual exam with the presence of the whole group. Assessed by an external examiner.  Allowed tools: All tools allowed.  Re-exam: Students who failed a semester project have to improve the project. There will be no guidance in the period up to hand in. The project is assessed at an oral exam.
SE-ADW1	Applied Drinking Water Quality	5	<ul style="list-style-type: none"> <li>- Understand principles of drinking water sampling</li> <li>- Understand basic laboratory analyses for drinking water (physical, chemical and microbiological)</li> <li>- Have knowledge of drinking water quality criteria (Danish/European drinking water legislation, and supplemental parameters)</li> <li>- Describe aspects of deterioration of drinking water quality (physical, chemical and microbiological)</li> <li>- Explain causes of different contamination scenarios</li> </ul>	<ul style="list-style-type: none"> <li>- Collect samples for analysis of drinking water quality (water, backwash water and/or filter medium)</li> <li>- Practice basic laboratory methods and equipment (pipettes, scales, dilution, calibration, safety)</li> <li>- Perform laboratory analyses for documentation of drinking water quality (physical, chemical and microbiological parameters)</li> <li>- Obtain and evaluate empirical data from laboratory experiments</li> <li>- Report results from laboratory analyses in text, figures and tables</li> <li>- Compare and evaluate the application</li> </ul>	<ul style="list-style-type: none"> <li>- Analyse results of laboratory experiments, discuss the results and relate the results to the scientific papers and other literature</li> <li>- Analyse a situation with undesirable drinking water quality including: How to collect data and select the appropriate analyses. How to cope with the consumers and the legislation, etc.</li> </ul>	Exam prerequisites: Mandatory assignments handed in before deadline and accepted.  Type of exam: Ongoing tests in the form of two written assignments, each weighing 25%, and an oral individual exam, weighing 50%. Exam is without preparation and based upon course assignment(s)  Allowed tools:  Re-exam:

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			- Understand the use of extended water treatment methods	of physical, chemical and microbiological drinking water analyses		Method will be similar to the ordinary exam.
SE-AWT1	Advanced Water Treatment	5	Describe various aspects of deterioration of drinking water quality (physical, chemical and microbiological). Describe different contamination scenarios. Have knowledge of drinking water quality criteria (Danish/European drinking water legislation, and supplemental parameters). Understand principles of drinking water sampling. Understand principles of drinking water analyses (physical, chemical and microbiological) Understand the use of extended water treatment methods	Sample and characterize drinking water samples with respect to physical, chemical and microbiological parameters. Obtain and evaluate empirical data from laboratory experiments. Report results from laboratory analyses. Compare and evaluate the application of physical, chemical and microbiological drinking water analyses. Retrieve relevant information on current topics related to drinking water quality such as softening, pesticides, etc. Extract and evaluate data of drinking water analyses from the Jupiter database	Analyse a situation with undesirable drinking water quality including: How to collect data and select the appropriate analyses, How to cope with the consumers and the legislation, etc. Design methods for advanced drinking water treatment depending on a given water types chemical composition and challenges. . Design laboratory experiments to analyse the applicability of a proposed treatment method. Economic assessment of proposed methods.	Exam prerequisites: Mandatory assignments handed in before deadline and accepted.  Type of exam: Ongoing tests in the form of two written assignments, each weighing 25%, and an oral individual exam, weighing 50%. Exam is without preparation and based upon course assignment(s)  Allowed tools:  Re-exam: Method will be similar to the ordinary exam.
SE-AWW1	Applied Wastewater Quality	5	- Usage and application of basic laboratory equipment - Possible methods for characterization of wastewater quality and their application - Sampling and analytical techniques methods - Composition of wastewater and its significance in wastewater treatment - Recognition of wastewater properties in assignment for different wastewater treatment methods - Ability to find the dependency between tested parameters - Basic characteristics of different treatment methods considering selected technologies	- Calibration methods of electrodes and pipettes - Advanced application of Hach-Lange cuvettes for indication of different parameters in wastewater quality - Calculation of dilution factors and concentration levels for different samples and chemicals - Standards for wastewater characterization - Analytical methods in indication of wastewater properties - Principles and application of characterization methods - Reading of the wastewater discharge quality reports for different industries	- Analyse a situation with undesirable wastewater discharge quality or improving existing method for control and treatment, including: How to collect data and select the appropriate analyses, How to cope with the consumers and the legislation, etc. - Indicate wastewater streams for different industries and its production lines - Characterize wastewater samples with respect to physical, chemical and microbiological parameters - Obtain and evaluate empirical data from laboratory experiments - Report results from laboratory analyses - Compare and evaluate the application of physical, chemical and microbiological wastewater analyses - Assign wastewater stream to a given wastewater treatment method	Exam prerequisites: Mandatory assignments handed in before deadline and accepted.  Type of exam: Ongoing tests in the form of two written assignments, each weighing 25%, and an oral individual exam, weighing 50%. Exam is without preparation and based upon course assignment(s)  Allowed tools:  Re-exam: Method will be similar to the ordinary exam.
SE-DSD1	Design & Simulation of District Heating System	5	Know the design and structure for energy storage and carry out energy balance for the system. Calculate main dimensions, capacities and losses for storage of thermal energy. Make energy analysis and calculate temperature changes for non-stationary	The student will be able to analyse the correlation between energy consumption, storage and production and to evaluate storage solutions, calculate storage capacities and carry out software simulations for renewable and industrial thermal energy systems.	The course will give the student competences in designing a thermal solar system including short term and seasonal storage. Furthermore, the student will be able to communicate and collaborate with energy engineers	Assessed on the basis of the mini project. Internal assessment

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			heat flow processes. Carry out computer simulations for changes in different energy systems like storage charging and discharging, mixing of flows, changing of thermodynamic cycle and optimize energy streams.		about storage and operation of energy systems.	
SE-DWT1	Design of Wastewater Treatment Plant	5	Knowledge of designing basic treatment facilities in order to remove grease and oil, sand and gravel, suspended solids, organic matter and ammonia. Establishing of a simple flow diagram and understanding of the internal relations between functions. Knowledge of hydraulic demands within the individual cleaning functions as well as the whole plant. Composition of wastewater and its significance in wastewater treatment. Recognition of wastewater cleaning methods related to the different wastewater treatment methods. Ability to find the right design of WWTP according to the actual outlet demands and geological conditions. Possible cleaning achievement from the different treatment methods and systems.	Able to design a mechanical – chemical and biological WWTP. Able to describe necessary supervision and control of a WWTP. Calculation of volume of sand and grease trap. Calculation of primary settlement tank. Calculation of biological tank with nitrification Calculation of secondary settlement tank	Knowledge about treatment methods and their depending of previous treatments of the wastewater. Comparing different treatment systems and able to choose the right one for the actual case. Design treatment functions applying methods in order to reduce energy consumption. Use optimal hydraulic design in order to avoid unwanted settlement within the system. Analyse a specific wastewater flow and outlet demands in order to establish the necessary treatment plant. Explain the design criteria from an environmental point of view, create a flow diagram, and plan drawing of the WWTP according to this.	Prerequisites: Course assignments handed in before deadline.  Type of examination: Ongoing tests in the form of two written assignments, weighing 25% each and an oral exam on the basis of a third written assignment, weighing 50%. Internal assessment.  Allowed tools: NA  Re-exam: Method will be similar to the ordinary assessment (new assignments).
SE-DWT2	Design of Wastewater Treatment 2	5	Concepts and assessment methods involved in providing basic understanding of activated sludge process and the possibility of achieving biological cleaning of wastewater. Usage and application of design models and constructions. Knowledge of the impact on the biological process from outside factors. Ability to find needed constructions and process to create the wanted level of treatment.	Able to calculate an activated sludge process tank with removal of organic matter, nitrogen and phosphor. Standards for sludge characterization. Analytical methods in identifying needed treatment of the wastewater. Principles and application of advanced as well as simple treatment methods. Functioning skills necessary to get a satisfying profit from working in groups	Characterize different treatment methods with respect to physical, chemical and microbiological parameters. Evaluate wastewater data and from this being able to describe a suitable cleaning method. Present results to the actual client in a clear and simplified way. Analyse a situation with inefficient treatment and find a way of improving this using learned treatment methods and skills.	Prerequisites: Course assignments handed in before deadline.  Type of examination: Ongoing tests in the form of two written assignments, weighing 25% each and an oral exam on the basis of a third written assignment, weighing 50%. Internal assessment.  Allowed tools: NA  Re-exam: Method will be similar to the ordinary assessment (new assignments).
SE-GPT1	Geophysics and Pump Test	5	By the end of the course the student must be able to • design a well site and suggest relevant geophysical pre-investigations.	After completion of the course, the student must • Be able to analyze and calculate flow and pressure variations for simple	The student will be able to occupy a position in a utility, municipality or engineering company where the current course will give them capabilities	Exam prerequisites: Mandatory course activities completed. Course assignments handed in before deadline.

			<ul style="list-style-type: none"> <li>- How the UN system influences global development within CE.</li> <li>- The UN SGDs</li> </ul>	<ul style="list-style-type: none"> <li>Assessments (LCIA) based on these, according to the guidelines.</li> <li>- Graphically present the results of LCA analyses and explain how these are related to the former steps of the analyses.</li> <li>- Carry out an LCA by using the program "LCABYG".</li> <li>- Identify barriers to change of CE development.</li> <li>- Identify opportunities for CE business development.</li> <li>- Make a simple business model.</li> <li>- Formulate individual change of behaviour to promote CE.</li> <li>- Evaluate business cases in relation to fulfilling the SDG.</li> <li>- Promote circular economy as an innovation tool for companies.</li> </ul>		accepted and evaluated in equal manner as within the course.
SE-SLM1	Sludge Management	5	<p>Concepts and assessment methods involved in providing basic understanding of sludge management techniques and their application in relation to kind of sludge and its origin Usage and application of basic laboratory equipment. Possible methods for characterization of sludge quality and their application. Ability to find dependency between analytical results (sludge composition) and sludge management techniques. Quality criteria definitions for possible management technique</p>	<p>Standards for sludge characterization. Analytical methods in indication of sludge properties. Principles and application of characterization methods. Sludge management techniques for different kinds and origins of the sludge. Quality criteria (Danish/ European regulations and legislations) Experimental reports and literature retrieval related to sludge management techniques</p>	<p>Characterize different sludge sources with respect to physical, chemical and microbiological parameters. Obtain and evaluate empirical data from laboratory experiments. Report results from laboratory analyses. Create, compare and evaluate the feasibility of different sludge management techniques based on sludge origin. Analyse a situation with inefficient sludge management technique and find way of improving existing management method, including how to collect data and select the appropriate analyses, etc.</p>	<p>Exam prerequisites: Mandatory assignments handed in before deadline and accepted.</p> <p>Type of exam: Ongoing tests in the form of 4 experimental reports and an exam in form of an individual presentation.</p> <p>Allowed tools: All tools allowed</p> <p>Re-exam: Method will be similar to the ordinary exam. (Based on new assignments)</p>
SE-STS1	Geothermal Systems	5	<p>The student will gain knowledge about geothermal systems as a sustainable energy source and to obtain an understanding of the physical design, dimensions, functions and operation of these systems.</p>	<p>After the completion of the course, the student must be able to:</p> <ul style="list-style-type: none"> <li>• Describe the thermal properties of rock and soil.</li> <li>• Explain the working principle of a heat pump.</li> <li>• Calculate thermal conductivity from thermal response test data.</li> <li>• Dimension a geothermal system using the professional software EED.</li> <li>• Calculate COP for a heat pump by</li> </ul>		<p>Exam prerequisites: All course assignments approved.</p> <p>Type of exam: Oral exam with an internal examiner.</p> <p>Allowed tools: None.</p> <p>Re-exam:</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
				<p>measuring produced and spent energy in a system.</p> <ul style="list-style-type: none"> <li>• Describe the construction of a borehole heat exchanger and identify critical areas.</li> <li>• Identify the various conflicts of interest in relation to ground source heating and cooling.</li> </ul>		Method will be equal to the ordinary exam.
SE-TBD1	Tool Box Drinking Water	5	Understand complex drinking water treatment technologies. Combine information from different sources. Reflect on researchers' findings, policies, legislation etc.	<p>Critical review of scientific papers. Compile and give presentations based on a number of papers with opposing views on a given topic. Analyse information from different sources and present a structured summary Argue the pros and cons of the presented topic</p>	<p>Ability to apply critical thinking to scientific papers, reports, legislation. Ability to reflect on the implications of applying a given technology, law or approach in a given situation. Ability to compare different technologies, policies etc., in different settings.</p>	<p>Exam prerequisites: Mandatory course assignments completed, handed in before deadline, and accepted.</p> <p>Type of exam: Individual oral exam without preparation based upon course assignments. The exam is in the form of an internal assessment.</p> <p>Allowed tools: All tools allowed</p> <p>Re-exams:</p>
ME-DES1	Design of Energy Systems	5	<p>The student will acquire knowledge in,</p> <ul style="list-style-type: none"> <li>* Refrigeration plants</li> <li>* Heat pumps</li> <li>* Refrigerants</li> <li>* Energy efficiency and impact on the environment</li> <li>* Cooling load</li> <li>* Air conditioning processes</li> </ul>	<p>The student will be able to analyse the thermal load for an energy plant and on this basis combine process theory and common dimensioning practice to design an energy efficient cooling plant or heat pump with low environmental impact.</p>	<p>The student will obtain competences to communicate about designs of different types of energy plants. Furthermore, the student will be able to design simple energy plants in a methodical way and more complex systems in co-operation with energy engineers.</p>	<p>Requirements for attending exam No requirements</p> <p>Type of exam: Test + mini-project with individual oral exam 2 tests have a weight of 20% each The mini-project is weighted with 30% and the oral exam is weighted with 30%.</p> <p>Intern assessment Censor: Internal</p> <p>Allowed tools: All</p> <p>Re-exam: As ordinary</p>
ME-ENE1	Renewable energy	5	<p>The student will acquire knowledge in,</p> <ul style="list-style-type: none"> <li>– Energy savings</li> <li>– Thermal solar heating and simulating of energy storage systems using</li> </ul>	<p>Analyse the consumption of town or building and evaluate possible energy savings. Calculate the energy production from renewable sources</p>	<p>The student will be able to communicate with students, engineers and companies about renewable</p>	<p>Requirements for attending exam Course assignments account for 40 % of final grade; it is divided into 20% for 2 assignments and 20% for 1 mini</p>

Code	Title	ECTS-points	Knowledge	Skills	Competences	Assessment
			TRNSYS 17 – Other thermal energy system (Packed-bed storage, storage wall and phase change energy storage) – Biomass and biogas – District heating and district heating network – Geothermal energy Renewable energy management (e.g. tax structures, costs for energy production, cost analyses, environmental issues)	with the integration of various energy storage scenarios. Calculate the eventually needs for supplementary fossil fuel production and the saving of CO2 emission.	energy and outline proposals for renewable energy supply.	project. The final exam will count 60%. The final exam divided into: a. Oral evaluation on the mini project (30%) b. Additional question from draw on the spot (30%)  Type of exam: Individual oral exam based upon a subject found by draw and mini project discussion. Censor: Internal  Allowed tools: None  Re-exam: Course assignments account for 40 % of final grade while the final re-exam count 60%. The students might asked to do new mini project if required, improve the already submitted one or keep it without improvement.
